## Music systems, languages, formats

[Chuck](#)

An audio programming language for real-time synthesis, composition, and performance for MacOS X, Windows, and Linux. ChuckK presents a new time-based concurrent programming model, which supports a more precise and fundamental level of expressiveness, as well as multiple, simultaneous, dynamic control rates, a precise and straightforward concurrent programming model, and the ability to add, remove, and modify code, on-the-fly, while the program is running, without stopping or restarting. It offers composers, researchers, and performers a powerful and flexible programming tool for building and experimenting with complex audio synthesis programs, and real-time interactive control.

[cSound](#)

Csound is a programming language designed and optimized for sound rendering and signal processing. To produce or process a soundfile with Csound, or to play a Csound instrument in real-time, one typically selects the orchestra and score through a simple "launcher" and then clicks on the "render" button to start the program compiling.

[Salieri](#)

The SALIERI System is an interactive software environment for structure oriented composition, manipulation and analysis of music. It is based on the SALIERI Language, a newly developed programming language which has been designed to facilitate specification and manipulation of musical material on the score level.

[Guido](#)

The GUIDO Music Notation Format is a formal language for score level music representation. It is a

plain-text, i.e. readable and platform independent format capable of representing all information contained in conventional musical scores. The GUIDO design is strongly influenced by the objective to facilitate an adequate representation of musical material, from tiny motives up to complex symphonic scores.

### SAOL/MPEG-4

SAOL is a music-synthesis language. SAOL stands for "Structured Audio Orchestra Language". It is a powerful, flexible language for describing music synthesis, and integrating synthetic sound with "natural" (recorded) sound in an MPEG-4 bitstream. SAOL lives within the MPEG-4 paradigm of streaming data and decoding processes. Thus, the Structured Audio toolset is not only a method of synthesis, but a streaming format appropriate for WWW-based (or any other channel) transmission of audio data. The 'saolc' package contains a program for encoding score and orchestras into the streaming format, and facility for decoding this format.

### SuperCollider

Environment and programming language for real time audio synthesis. You can write programs to generate or process sound in real time or non real time. SuperCollider can be controlled by MIDI, the mouse, Wacom graphics tablet, and over a network via Open Sound Control. SuperCollider can read and write sound files in AIFF, WAV, Sound Designer 2, and NeXT/Sun formats. Freeware, open-source. For MAC.

### Virtual Sampler SDK

Non-free. \$ 99 USD. Virtual sampler SDK enables you to embed a Wavetable synthesizer into your programs. This software development kit is suitable for usage in combination with Watcom C/C++, Visual C/C++, C++ Builder, Delphi and Visual Basic.

### Symbolic Composer

Non-free music composition and generation system for Windows and MAC (\$ 395). Symbolic Composer includes many features, such as: context-free scoring language, 1000 music algorithms, Lisp interpreter, 300 microtonal scales, programmable neurons, etc.

### Music notation formats

Music notation codes, MusiXML, Optical music recognition, musical fonts, etc.

### NIFF

NIFF (Notation Interchange File Format) is a new open music-file standard designed to replace midi files as exchange medium of musical notation data between computer programs.

### Silence

Advanced music composition and programming system written purely in Java. Interfaces with CSound, Midi, etc. Contains a software-synthesizer for non-real-time sound generation.
